TIPS & CARE ▾

Bathero's cleaning and Maintenance Tips – to keep clean your bathroom might seem like a mean task, but if done regularly it will keep the bathroom not only clean but also germ free.

GENERAL MAINTENANCE TIPS

- The bathroom should be cleaned once a week and even more frequently if you are a large family.
- Make it a firm rule in your home to rinse out the tub or shower stall immediately after you use it.
- To discourage mildew growth in the bathroom, increase air circulation and light to decrease moisture.
- Always start cleaning the bathroom from the top and work your way to the floor.
- Install and properly maintain de humidifiers, vents and exhaust fans
- After handling soapy cleansers and cleaning solutions please make sure you wash your hands clean and wipe them dry.
- Ensure you wipe the bathroom floor dry with the help of a wiper every time after a bath, to prevent slipping and falling.
- Ensure that all electrical appliances in the bathroom, are installed away from direct sources of water

SANITARYWARE CARE

TOILETS

You can use strong cleansers available in the market to clean the toilet bowl. Apply the cleaning solution on the insides of the toilet and let it remain for 10 to 15 minutes. Then lightly scrub with a toilet scrubber and flush to clean. Do not use hard chemical solvent to clean the plastic toilet seats as they might damage the material. Use a mild soapy solution and scrub with a soft scrub to avoid leaving scouring marks. Wash off the seat with an anti-septic solution to disinfect it.

WASH BASIN

The wash basin is the most frequently used sanitary ware in the bathroom. It is important that it is kept clean at all times to insure it is bacteria free. It is advisable to gently scrub it clean after every use, or at least once a day. Readily available cleansers can be used. Even soap solution works well, but would require some scrubbing. Using an anti-septic solution is a good idea.

INTERNAL FITTING OF CISTERN

Accumulation of small stone parts,dust or sand comming through pipeline in water on inlet and outlet rubber diaphragms may result in to water leakage or malfunctioning of internal flushing mechanism.in this situation all you have to do is open inlet/outlet valve and clean diaphragms or replace them.We suggest you to use only genuine spare parts only.

INSTRUCTIONS

WALL HUNG BASIN

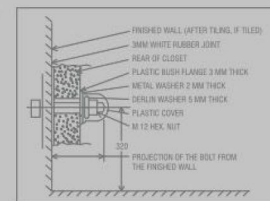

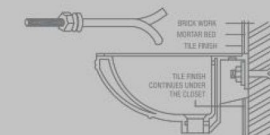

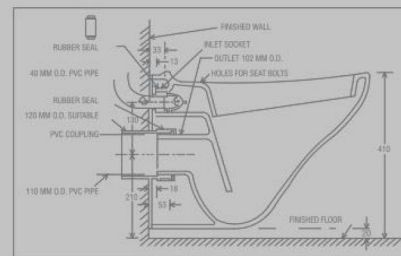

Fixing : the rag should be first grouted into the wall using cement / concrete, (as shown) as per the distance between slots provided in the wash basin. The bolts should be fixed perpendicular to the wall. Allow cement / concrete to set. Check if the Rag bolts are firmly fixed. Fix the Wash Basin in the bolts using Nuts & Washer.

CONCEALED WALL HUNG

- If the wall is going to be plastered for a thickness of 12 and a tile thickness of 6-7, the projection of the bolts from the finished wall should be 66 only.
- If the thickness of plastering and tile is less than the dimensions mentioned above, the bolt that are supplied along with the bracket should be moved into the wall by using a suitable spacer washer between the bolt head and the bracket frame.
- The bracket should be buried into the floor so that the height from the center line of the bolt to the surface fo the finished floor is 320.

TAPS & FIXTURES

- Avoid using strong cleaning agents to clean taps and other metal fixtures like shower units and knob, these may damage not only the surface coating & affect the working of the product.
- Use mild cleaning to clean taps and other fixtures. Instead spray cleaner and rinse thoroughly with water
- Avoid using acids and bleaches of any kind as these can lead to significant damage
- A simple eco-friendly cleaner can be used safely for cleaning metal fixtures. Spray & let it remain on the faucet for 5 minutes and then wipe clean with a damp cloth.
- Inspect the taps for remaining stains, scum or grime. If more cleaning is needed, fill a plastic bowl with 1/2 cup of baking soda and 1/4 cup of white Vinegar. Scrub the tap with a nylon scrub to loosen dirt particles and wipe with a soft damp cotton cloth. Finally, wipe the taps dry for a sparkling finish.
- It is also essential to keep the drainage pipes clean to prevent clogging. At least once a month clean up the drains to keep them free of grease, dirt, and hair. The mixture will foam up. Let stand for a few minutes then pour boiling water down the drain to wash down any clogging.
- To clean clogged showerheads, fill a plastic bag with undiluted white vinegar & submerge the showerhead in it. Secure the bag with a rubber band and leave it to soak overnight. The next day, scrub the shower with a toothbrush and wash it clean.
